WHAT IS LEFT TO DO

The Compare list and the shoe pages are in good shape. This is what is finished, and what remains, with how big each job is and what to do first.

DONE

- ✓ **Buy now / Wait on every list card**
  Green, amber, navy or grey label per card; follows the colour and size you pick.
- ✓ **Buy now and Worth waiting filters, and a "Best time to buy" sort**
  Replaced the older "Good time to buy" filter.
- ✓ **Size picker that opens at your size**
  On phones it centres on your size; each card's size row does too.
- ✓ **Brand, store and colour counts follow the chosen size**
  Counts now match the results.
- ✓ **Empty state with nearby sizes**
  Offers the neighbouring sizes and "Any size".
- ✓ **Two compact cards per row on phones**
  Price tiles become a store count on small screens.
- ✓ **Related sneakers use the full Compare card**
  Sizes, store prices and the verdict; up to 8 per shoe.

STILL TO DO

	ITEM	WHY IT MATTERS	SUGGESTED FIX	EFFORT	PRIORITY
R1	**Price history message** SHOE PAGE	Most shoes have about 4 days of history, so the chart looks thin or blank and shoppers think it is broken.	Say "Tracking since 17 Oct (4 days)" and draw what exists, with a note that the chart gets richer over time.	SMALL	HIGH
R2	**Page navigation** COMPARE LIST	1,118 numbered pages cannot be browsed. Only the first few pages are ever reached.	Add first / last, "jump to page", and a "Load more" button; keep the numbered links for search engines.	SMALL	HIGH
R3	**Delivery data check** SCRAPER + CARDS	Mainstreet states 28 days, which looks wrong and makes it look slow against 3 to 6 days elsewhere.	Check the store's own page, fix the parser, and hide implausible delivery ranges until confirmed.	SMALL	HIGH
R4	**Popular-first default** COMPARE LIST + API	Mainstreet is about 340,000 of the listings, much of it long tail, so later pages feel empty.	Default to shoes in 2+ stores or 3+ sizes in stock, with a "Show everything" switch. Keep the full catalogue reachable.	MEDIUM	HIGH

STILL TO DO, CONTINUED

	ITEM	WHY IT MATTERS	SUGGESTED FIX	EFFORT	PRIORITY
R5	**Search engine basics (SEO)** COMPARE LIST	No canonical or previous / next tags on paged results, and every page has the same title.	Add canonical and rel prev / next, and a unique title and description per page and filter. Do this before going public.	SMALL	MEDIUM
R6	**Biggest price drop sort** API + CARDS	Shoppers love deals, and the data exists (the price-falls strip already uses it).	Add a "Biggest price drop" sort and a "-12% this week" tag on cards, from daily best prices.	MEDIUM	MEDIUM
R7	**Search synonyms and typos** API SEARCH	People type "AF1", "AJ1", "Dunks" or misspell brands. Some of these find nothing.	A small synonym table (AF1 to Air Force 1, AJ to Air Jordan, and so on) plus a "did you mean" line.	SMALL	MEDIUM
R8	**Speed** API	Searches with a size take about 0.5 to 2.3 seconds, and the first call after a restart about 4.6 seconds.	Cache per-size results for a few minutes (Redis) and precompute the filter counts.	MEDIUM	MEDIUM
R9	**Price chart and store sell-outs** SHOE PAGE	A price can jump because the cheap store sold out, not because the price rose. The Buy now / Wait model handles this; the chart does not.	Mark sell-outs on the chart, or draw one line per store.	MEDIUM	MEDIUM

STILL TO DO, CONTINUED

	ITEM	WHY IT MATTERS	SUGGESTED FIX	EFFORT	PRIORITY
R10	**Same shoe, different names** PAIRING SCRIPT	Some listings of one shoe have slightly different names, so they do not combine into one card.	Extend the pairing step with name normalisation and a review list of near-duplicates.	LARGE	MEDIUM
R11	**Common sizes first** SIZE PICKER	Sizes from UK 3 to 15 are all shown; most shoppers want 6 to 11.	Show 6 to 11 first with a "More sizes" button. The row already centres on your size.	SMALL	LOW
R12	**Duplicate discount badge** CARD	On tablet and desktop the discount shows twice on a card (top right and beside the price).	Keep one.	SMALL	LOW

SUGGESTED ORDER

Quick wins that fix what shoppers see first, then the work that makes the catalogue feel complete.

WORTH KNOWING

"Wait" will stay rare for a while

It needs a shoe tracked for 7+ days. Today about 55 shoe-sizes say Wait and about 276,000 say "Too early". The nightly log will show whether those calls were right (first results around 3 November, 30-day results around 19 November).

Related sneakers load extra data

Each related card fetches its own sizes and prices. Check page speed after deployment.

Third-party sale prices

Some stores show their own crossed-out price. We show it as the store's figure, not ours.
